

About Oliver K. Manuel and five decades leading to Climategate 22Mar2012

Having made yourself alike in pain and pleasure, profit and loss, victory and defeat, engage in this great war and you will be freed from sin, Arjuna.

Fear and the instinct of survival
persuaded world leaders to hide the energy that vaporized Hiroshima in 1945: They thus became rulers rather than servants of the public
The 2009 result: Climategate !

*

Abstract

For sixty-seven (~67) years after Hiroshima vanished on 6 Aug 1945, world leaders tried to: Avoid nuclear war, unite nations, reduce nationalism and racism at the expense of (1) Veracity on the nucleus, the Sun, Earth's climate and (2) Civilian control of government.

Problem: Society is collapsing because world leaders reacted ***in fear to nuclear fires*** in 1945, compromising ***scientific integrity*** and ***constitutional government*** to save the world – despite ancient scriptures of all religions reporting that the great benevolent reality surrounds us and sustains life, and Einstein's use of $E = mc^2$ in 1905 to show that energy (**E**) is stored as mass (**m**) in material that surrounds us and sustains life.

Solution: Restore *integrity to sciences, rights of citizens and civilian control of government*, without reviving racism the threat of nuclear warfare, and/or retaliation for deception since 1945

.....

Born in 1936, I was a high-school drop-out and an angry, arrogant atheist when I started research with Professor Paul Kazuo Kuroda at the University of Arkansas on the "Origin of the Solar System and its elements" in 1960.

.....

In 1972 I became uneasy about the politicalization of science, but I could not grasp the problem until Climategate emails and documents were released in November of 2009.

Through my research advisor (formerly Dr. Kazuo Kuroda of the Imperial University of Tokyo who first analyzed the ashes of Hiroshima), I have tentatively traced this back to secret, fear-driven agreements by H. Kissinger, Zhou En-Lai, Chairman Mao, Brezhnev and Nixon in 1971 to unite nations, avoid the threat of mutual nuclear annihilation, and conceal information about nuclear energy [1] because:

- _a.) Hiroshima was vaporized on 6 Aug 1945
- _b.) The Cuban Missile crisis in late Oct 1962

Even before 1971, leaders of the US scientific community blocked normal channels of communication on nuclear forces that create and destroy chemical elements in nuclear bombs and reactors [2-5]. Later discoverers of “*cold fusion*” were also harassed [6].

Evidence was hidden that *the Sun’s core is neutron-rich, like the cores of all galaxies, stars, some planets and heavy elements (>150 amu), including the uranium nuclei that vaporized Hiroshima: **Neutron-rich and energized by neutron repulsion.***

World leaders and the scientific community lost public confidence by not acknowledging their responsibility for misinformation in Climategate emails and documents released in Nov 2009. To help move beyond the human flaws in us all , I publicly acknowledge that:

- Until 1996 I was as self-centered and arrogant as those that exchanged our “**Bill of Rights**” (First ten amendments to US Constitution) for personal security or profit.
- Professor Kuroda probably selected me to carry the message because I was so focused and energized by insecurities, and tightly clinging to the scientific method in 1960.
- Those insecurities drove me to succeed, but wrecked havoc in my personal life until I accepted powerless over all things controlled by cause-and-effect in 1996 and grasped the great benevolent reality outside my own ego cage.

These documents and videos summarize society’s demise and the benevolent reality that surrounds and sustains us as natural, living parts of a great dynamic universe powered by *neutron repulsion* and continuously bathed in energy that comes from the Sun’s core in the form of radiation ($E = h\nu$) and potential energy stored as rest mass ($E = mc^2$).

A Hungarian scientist solved this mystery in late 1977 but disappeared. I only recently heard of his work.

Peter Toth, "Is the Sun a pulsar?" *Nature* **270** (November 1977) 159-160.

<http://www.nature.com/nature/journal/v270/n5633/abs/270159a0.html>

[Reply](#)

2. [omanuel](#) says:

[March 25, 2012 at 3:15 pm](#)

Professor Kuroda (1917-2001) provided the training that made it possible for me to grasp: "**Neutron Repulsion**" is the source of energy at centers of heavy atoms ($A > 150$ amu), planets, stars, and galaxies that sustains our lives as part of this **Great Dynamic Universe – God, Reality, What Is !**

Kuroda, the nuclear scientist sent from the Imperial University of Tokyo to investigate the *man-made* “**nuclear fire**” that consumed Hiroshima on 6 August 1945, perhaps grasped **Reality** at that time!

In 1956 he tried to explain that **nuclear fires** occurred spontaneously on Earth for billions of years, but world leaders and leaders of the scientific community refused to hear.

They were frightened by **nuclear fire** and sought to control, rather than to admit powerlessness over this force that creates and destroys the chemical elements and powers “**The Great Reality**” that surrounds and sustains us.

In short, **FEAR** persuaded them “**to play God**” themselves.

That is the root of society’s current demise !

Kuroda’s autobiography is a pleasant way to learn about life at the Imperial University of Tokyo during WWII:

<http://www.omaturnr.com/abstracts2005/PKKAutobiography.pdf>

Current leaders of the US scientific community, Ralph Cicerone, John Holdren, Steven Chu, and Lisa Jackson and Charles Bolden – are now trapped with the rest of us, *like rats on a sinking ship*, because their predecessors were frightened by the “**nuclear fire**” that consumed Hiroshima on 6 August 1945 and then threatened to destroy the rest of the Earth in the Cuban Missile crisis of late October 1962.

Climategate is coming to a close. May we have the wisdom to work together to undo the damage society suffered and not get sidetracked trying to punish those who led society to its current demise out of fear of the “**nuclear fires**” over Hiroshima !

In his autobiography, “*Home Is Where the Wind Blows,*” Sir Fred Hoyle documents the **abrupt, and seemingly inexplicable U-Turn** in astronomy, astrophysics, solar physics **immediately after “nuclear fires” ended the Second World War:**

[Referring to Hoyle's meeting with Sir Arthur Eddington one spring day in 1940]: “*We both believed that the Sun was made mostly of iron, two parts iron to one part of hydrogen, more or less. The spectrum of sunlight, chock-a-block with lines of iron, had made this belief seem natural to astronomers for more than fifty years.*” . . . (page 153)

“*The high-iron solution continued to reign supreme in the interim (at any rate, in the astronomical circles to which I was privy) until **after the Second World War**, when I was able to show, to my surprise, that the high-hydrogen, low iron solution was to be preferred for the interiors as well as for the atmospheres.*” (page 153-154)

“*My paper on the matter confounded a doctrine of (Raymond) Lyttleton, who used to say there are three stages in the acceptance by the world of a new idea.*

1. *The idea is nonsense.*
2. *Somebody thought of it before you did.*

3. We believed it all the time.

This matter of the high-hydrogen solution was the only occasion, in my experience, when the first and second of these stages were missing.“ (page 154)

It is possible Dr. Kazuo Kuroda, *the extremely talented analytical nuclear chemist* sent from the Imperial University of Tokyo, realized element synthesis had occurred in ashes he recovered from the “**nuclear fire**” that consumed Hiroshima on 6 August 1945.

He never directly mentioned that idea to me, nor to anyone else that I know, but in hindsight I wonder if Kuroda came back from his trip to Hiroshima with that secret information?

Kuroda mentions element synthesis and nuclear fission together in some of his later papers.

Earth's Changing Climate, the Sun's Pulsar Core, Iron-rich Mantle

A 1996 peer-reviewed paper in *Radiophysics and Quantum Electronics (RQE)* shows how the Sun's neutron core might explain long-term climate changes that Al Gore, the US NAS, the UK's RS, and the UN's IPCC attributed to **AGW** (Anthropologic Global Warming):

V.A. Kotov, "A pulsar inside the Sun?" *RQE* **39**, 811-814 (1996)

<http://www.springerlink.com/content/j549440457107v36/>

"The Crimean observation of solar oscillations in 1974–1982 showed that the basic period of pulsation of the Sun hidden in its deep interior was equal to

P 0 = 160.0101±0.0001 min.

More recently, the period was changed to the new value

P 1 = 159.9662±0.0006 min,

which almost coincided with the annual sidelobe of the former period P 0.

The amplitude of the P1 oscillation has increased considerably over 1994–95.

We substantiate the hypothesis that

a. *The change in the period was caused by the interaction of the P0 oscillation with the rapid rotation of the solar core, and that*

b.) *The latter has the form of a compact, highly magnetized object **like a neutron star** rotating with sidereal period P1.*

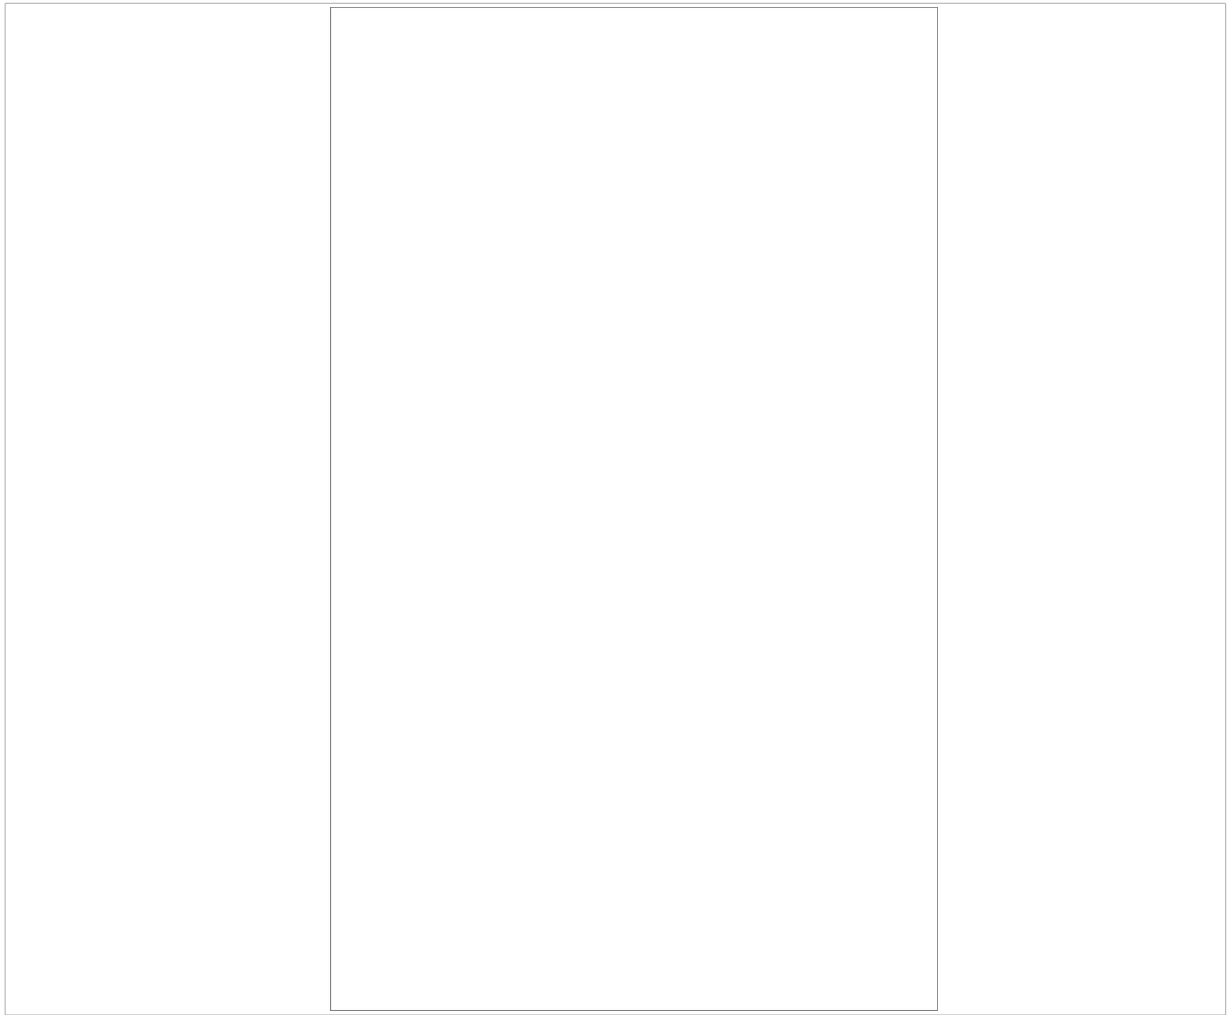

Translated from Izvestiya Vysshikh Uchebnykh Zavedenii, Radiofizika **39**, no. 10, pp. 1210–1214 (October 1996)."

This 1996 paper by Kotov confirms the basic validity of

a. The 1977 paper Peter Toth published in *Nature* before vanishing:

<http://www.nature.com/nature/journal/v270/n5633/abs/270159a0.html>

b. Papers and reports Carl A. Rouse (PhD, Caltech, 1956) published on solar structure and oscillations from 1964 to 2000. See: *Origin of Elements in the Solar System: Implications of Post 1957 Observations*, ed. O. Manuel, Kluwer Academic-Plenum Publishers, New York, NY, USA, pp. 317-344:

Kotov’s 1996 paper is consistent with the results of an American particle physicist, Dr. Carl A. Rouse (PhD, Caltech, 1956), whose findings on solar structure and oscillations

(1964-2000) were widely ignored, apparently because world leaders planned to **Unite Nations against Global Climate Change !**

Electricity, Magnetism, and Nuclear Forces

Today there are “*rumbling in the hallowed halls of physics: **Electrical discharges (lightening) produce neutrons.***”

<http://arstechnica.com/science/news/2012/03/nuclear-lightening.ars>

Those hallowed halls will come *a-tumbling down anyway, like “the walls of Jericho”*. Both were fabricated out of ***Fear of Reality, God, “What Is”***

1. The hallowed halls of modern physics were rebuilt at the end of World War II, out of ***fear of “nuclear fires” that consumed Hiroshima about sixty-six years ago.***

2. Modern physics erred in ignoring the power of electricity and magnetism since the end of World War II. Evidence of current-induced nucleosynthesis on the solar surface was finally reported in 2006 [*J. Fusion Energy 25*, 141-144 (20 Oct 2006)]:

<http://arxiv.org/ftp/astro-ph/papers/0512/0512633.pdf>

That report was viewed favorably by Electric Universe folks. However, I still questioned electricity’s net influence on solar luminosity for two reasons:

i.) Electricity is only important for the expanded (atomic) form of matter.

The visible universe consists of two forms (compacted or nuclear and expanded or atomic) of

one fundamental particle:

The Neutron and The Hydrogen atom (p⁺ and e⁻)
The Compacted and The Expanded Forms of Matter

Charge separation occurs when a neutron decays. Electricity plays an important role in the expanded (atomic) form of matter.

ii.) Neutron repulsion energizes neutrons at the centers of

- _a.) Heavy nuclei ($A > \sim 150$ amu) like uranium,
- _b.) Fluid planets – like Jupiter,
- _c.) Ordinary Sun-like stars,
- _d.) Galaxies like ours.

Forces of attraction and repulsion between nucleons were deciphered in 2000, reported in [*J. Fusion Energy* **19**, 93-98 (2001)] and shown on the above cover of the 1999 ACS Symposium Proceedings organized by Nobel Laureate Glenn T. Seaborg:

<http://www.omaturn.com/abstracts/jfeinterbetnuc.pdf>

3. Structure and reactivity of nuclei reflect these forces of attraction and repulsion:

- _a.) Very light atoms ($A < 4$ amu) are fusile (fusible) because of high surface/volume ratios and unsaturated, attractive N-P forces at their surfaces
- _b.) Heavier atoms ($A = 4-150$ amu) have high nuclear stability and cores consisting of approximately equal numbers of neutrons and protons (Like He-4).
- _c.) Yet heavier atoms ($A > 150$ amu) become increasingly unstable, have neutron-rich cores, and always spontaneously decay for $A > 209$ amu.
- _d.) Centers of ordinary stars and galaxies exhibit the behavior expected in the core of very, very heavy atoms.

4. Similarity between atomic and stellar structures were noted by Niels Bohr in 1913

http://hermes.ffn.ub.es/luisnavarro/nuevo_maletin/Bohr_1913.pdf

We later arrived at a similar conclusion [*J. Fusion Energy* **25**, 107-114 (2006)]

<http://arxiv.org/pdf/nucl-th/0511051v1.pdf>

**March 22 CERN Colloquium on Low Energy Nuclear Transmutations
Confirms 1989 Fleischmann-Pons report “Cold Fusion” aka “LENT”**

Slides from two of the talks presented at the CERN Colloquium illustrate the sad state of nuclear science after sixty-six years (66 yrs) of *data manipulation from fear of annihilation in Hiroshima-like “nuclear fires.”*

1. The following quotes are from the third slide (#3) in the overview of “*Low Energy Nuclear Transmutations*” by Professor Yogendra Srivastava at the 20120322 CERN Colloquium:

<http://indico.cern.ch/getFile.py/access?resId=1&materialId=slides&confId=177379>

- - - - -

Hence, the renewed clarion call for hot fusion **-supposedly** occurring in the core of the stars, for T around 17 Million K

- I say **supposedly**: for the lack of success achieved so far

-after 60 years and over 200 billion dollars-

might make you wonder that perhaps a realization of hot fusion on Earth is even more ephemeral than the one at 300 degrees.

- While strident criticism of low temperature fusion is legion among most physicists, **the silence generated by the same physicists regarding hot fusion is positively deafening.**

- Europe is spending over a billion Euros on hot fusion this year

- An optimistic estimate for production of usable energy via hot fusion is the year 2025.

- In the US, the prognosis is for the year 2050.

2. Slides from Mitsubishi Heavy Industries presented at the same 20120322 CERN Colloquium on the nuclear transformations were confirmed by chemical analysis of Y. Iwamura, M Sakano, T Itoh *et al* on deuterium-permeated palladium (Pd)

<http://indico.cern.ch/getFile.py/access?resId=5&materialId=slides&confId=177379>

a.) Sr into Mo (element #38 into element #42)

b.) Cs into Pr (element #55 into element #59)

c.) Ba into Sm (element #56 into element #62)

d.) W into Os (element #74 into element #76)

e.) W into Pt (element #74 into element #78)

The above chemical analysis remind me of the types of analysis that Dr. Kazuo Kuroda probably performed on nuclear ashes of Hiroshima when he was sent there to determine the nature of the weapon used on 6 Aug 1945.

That is one reason for my interest in figuring out **what Kuroda found in Hiroshima ashes in Aug 1945 and why leaders of NAS & AGU tried to block publication of his report on self-sustaining nuclear fission at the April 1956 AGU meeting in Washington, DC**

See: <http://www.springerlink.com/content/n556224311414604/>

Fifty-six years (56 yrs) later another leader of **NAS & AGU**, Dr. Peter Gleick is now in the news:

<http://www.examiner.com/seminole-county-environmental-news-in-orlando/dr-peter-gleick-and-the-end-of-the-global-warming-myth>

The above two slides should be posted in the offices and studied by the US DOE Secretary of Energy (Stephen Chu), US EPA Administrator (Lisa Jackson), Director of the US White House Office of Science and Technology Policy (John Holdren), President of the US NAS (Ralph Cicerone), and US DARPA director (Regina Dugan), . . . even if she escapes to Google and leaves us in darkness.

http://www.computerworld.com/s/article/9225527/DARPA_director_goes_to_Google_but_prob es_continue

Post-1945 History of Science and Western Society

Sir Fred Hoyle noted above that leading authorities in astronomy, astrophysics and solar scientists made an **abrupt U-turn** in their beliefs about the internal composition of the Sun **when World War II ended:**

<http://omanuel.wordpress.com/about/#comment-15>

An epiphany ? ! ?

We do not know **what Kuroda found** in Hiroshima ashes in Aug 1945 nor **why leaders of NAS & AGU blocked publication of the paper** he presented at the April 1956 AGU meeting on self-sustaining nuclear fission reactors on earth.

Abbreviated reports were limited to two, one-page papers showing how he calculated the infinite multiplication constant and its prediction of natural self-sustaining nuclear reactors on Earth ["On the nuclear physical stability of the uranium minerals," *J. Chem. Physics* **25**, 781 (1956); "On the infinite multiplication constant and the age of the uranium minerals," *J. Chem. Physics* **25**, 1256 (1956)]

Opinions on element synthesis and the Sun's source of energy were set for the next half century by this statement from the B2FH paper, "Synthesis of the elements in stars," *Reviews of Modern Physics* **29**, 547-654 (Oct 1957): http://rmp.aps.org/pdf/RMP/v29/i4/p547_1

"It seems probable that the elements all evolved from hydrogen, since the proton is stable while the neutron is not. Moreover, hydrogen is the most abundant element, and helium, which is the immediate product of hydrogen burning by the pp chain and the CN cycle, is the next most abundant element. The packing-fraction curve shows that the greatest stability is reached at iron and nickel. However, it seems probable that iron and nickel comprise less than 1% of the total mass of the galaxy. It is clear that although nuclei are tending to evolve to the configurations of greatest stability, they are still a long way from reaching this situation."
(Page 549, Right column)

We do not know **what Kuroda found in the ashes of Hiroshima** in Aug 1945 nor **exactly what he reported** at the April 1956 AGU meeting in Washington, DC, but **his 1956 papers were confirmed in 1972** by the discovery of natural, self-sustaining nuclear reactors in the Oklo mine, Republic of Gabon. Then Professor Paul K. Kuroda began his 1983 paper this way:

*“Until recently, scientists believed that the chemical elements were synthesized only in stars. The discovery of the Oklo phenomenon in the Republic of Gabon in 1972 has revealed, however, that a **nuclear “fire” had existed on the earth** and large-scale transmutations of the elements were occurring on the planet 1.7×10^9 years ago.”*

8.  [Neil Oliver](#) says:
[April 6, 2012 at 7:47 pm](#)

Hello,

Firstly, let me state that my educational background does not seem to be sufficient to keep up with all of the information that you put forth. I have made it through Calculus, Engineering Physics and Basic Chemistry while working on an Engineering Degree, maybe electrical or mechanical. Secondly, I am young at 45 and the loss of my “God given rights” which exceed the “Bill of Rights” is near and dear to me. I would like to point out that when the “Bill of Rights” were introduced some feared that people it would someday limit personal freedom. As such, people always run to the “Bill of Rights” today when they are being infringed on by government. The real idea of the Constitution was to limit the Federal Government which is why it was intended to have limited power and the rest was supposed to be retained with the State and the people of that State, after all that is the source of our governments power. So here we are with a Federal Government that continues to exceed its Constitutional Boundry. We are in trouble.

Now you have captured my attention with your postings here on your blog. Can you please reduce your thoughts to my level?

I do not understand the argument that you are making about the sun’s influence on the earth through nuclear fire?

Another issue you may be able to help me with is the idea of the neutron. If the universe was filled with hydrogen gas that collected into pockets and then formed into stars, where did the neutron come from since hydrogen does not have a neutron to start with? Do stars create Neutrons?

Next question, but first some background to the question. A star goes super nova because it has exhausted its fuel and thereby creates a nebula. How does a nebula become a star nursery when it should not contain enough fuel to make new stars?

I would like to carry on a conversation with you so that I can learn a little more than what I know today.

Sincerely,
Neil Oliver

Neil, we demonstrate our own inability to self-govern every time we accept consensus gobbledygook as scientific facts

- from the “**Bilderberg standard solar model of the Sun**”, formulated forty-five years (45 yrs) ago in April 1967 to guide science safely through the space age with an abundant supply of fudge factors “**Dark energy**”, “**WIMPs**”, “**Dark Matter**”, “**Higgs boson**” (God-particle), “**Oscillating solar neutrinos**”, etc.

- to the post-modern science of the **UN’s IPCC**, **EU’s LHC**, **AI’s AGW etc.**, *ad infinitum*.

[Reply](#)

9.  [omanuel](#) says:

[April 7, 2012 at 5:48 am](#)

@Neil Oliver

Thank you for your insightful comments. Please be patient and I will try to respond to your questions candidly, even when the answer is “*I don’t know.*” I am encouraged by your recognition that “*We are in trouble.*”

To help, Neil, you will have to be spiritually strong. Otherwise your efforts will be no more helpful than those of Winston Smith in George Orwell’s novel, **1984**.

<http://www.online-literature.com/orwell/1984/>

That book was banned in the old USSR, and I expect it to disappear here too if present trends continue.

I am old, my mind works slower but perhaps more accurately, and I tire easier.

But I am committed to completing an autobiographical book, **My Journey to the Core of the Sun**, to helping others, and to helping future generations enjoy:

- a.) The “Bill of Rights” protections that quietly slipped away over my lifetime, and
- b.) A life of continuous discovery without compromising scientific principles for funds.

Tonight I am exhausted after returning from a pleasant dinner in St. Louis with my second PhD student, who is now white headed too!

Brief response to your second paragraph:

1. The universe is remarkably more simple than popular models. I have little or no respect for computer models of reality and self-deceiving gobbledygook parading as modern science.
2. The “**nuclear fire**” that destroyed Hiroshima on 6 Aug 1945 is the same “**nuclear fire**” that sustains our lives and Earth’s constantly changing climate. The same “**nuclear fire**” created our elements in the Sun, before ejecting them five billion years (5 Gyr) ago in the event that produced the planetary system orbiting the SN remnant that we now call the Sun.
3. Compact nuclear matter is becoming expanded atomic matter as the universe expands. Neutrons are becoming interstellar atoms of hydrogen:

$$V(\text{final}) / V(\text{initial}) \sim 10^{39}.$$

The popular model of expanded atomic matter becoming compact nuclear matter is false.
 Interstellar atoms of hydrogen are NOT becoming neutrons:
 $V(\text{final}) / V(\text{initial}) \sim 10^{-39}$.

“Post-modern scientists” try to make Nature fit false models of Nature by adding fudge factors like “*dark matter*”, “*dark energy*”, etc., *ad infinitum* !

Our “God-given rights” diminish each time we accept garbage as science.

12.  [omanuel](#) says:

[April 13, 2012 at 7:59 pm](#)

The events leading to Climategate suggest *purposeful* misinformation on the energy source that creates elements and sustains life and Earth’s constantly *changing climate* after Hiroshima was destroyed on 6 Aug 1945.

Three books on human behavior were most helpful in deciphering these events:

_ i.) “**1984**” by George Orwell (1949). Written in 1948.

<http://www.online-literature.com/orwell/1984/>

_ ii.) “**The Naked Ape**” by Desmond Morris (1967)

“*The naked ape is essentially an exploratory species . . .*” (p/10)

The scientific method allows naked apes to make good conclusions and avoid danger of capture or being controlled by George Orwell’s “*Big Brother*”

http://evolbiol.ru/large_files/naked_ape.pdf

_ iii) “**The Road Less Travelled**” by M. Scott Peck (1978)

This is the most practical guide for naked apes on the journey of life.

1. Problem:

When Hiroshima was consumed by “*nuclear fires*”, world leaders were apparently driven by *fear* and the *instinct of survival* to:

_ a.) *Unite Nations*, and

_ b.) *Hide the source of energy that ignites “nuclear fire”*.

2. Evidence:

1940: Fred Hoyle *et al.* all believe **the Sun is mostly Iron***

1945: Hiroshima vanished because $E = mc^2$: 6 Aug 1945

Oliver K. Manuel Cape Girardeau, MO, USA **FLAG**

Leaders of the scientific community have been cooperating with leaders of nations and corporations to gain more support for scientific research (that yields desired results) for decades:

That is why they ignored:

- a.) Deception in Climategate emails and documents
- b.) Disequilibrium in the operation of the Sun, and
- c.) Neutron repulsion in nuclear rest mass data.

Every passing days brings new questions about their possible involvement in other incredible events since Hiroshima was consumed by “nuclear fire” on 6 Aug 1945.

With kind regards,

Oliver K. Manuel

Oliver K. Manuel Cape Girardeau, MO, USA **FLAG**

Read the opinions of Sir Fred Hoyle and Sir Arthur Eddington before “**nuclear fire**” consumed Hiroshima on 6 Aug 1946 [Fred Hoyle, “*Home Is Where the Wind Blows*,” University Science Books, 1994, page 153].

“We both believed that the sun was made mostly of iron, . . .”

“The high-iron solution continued to reign supreme in the interim (at any rate, in the astronomical circles to which I was privy) until after the Second World War, . . .”

[Fred Hoyle, “Home Is Where the Wind Blows,” University Science Books, 1994, page 153].

During the space age, the iron-rich sun was reaffirmed by analysis of

- a.) Meteorites in **1975**
- b.) Apollo lunar samples in **1983**
- c.) Jupiter’s atmosphere in Galileo probe in **1995**

And the results were hidden, ignored or manipulated because world leaders did not want the public to know that our lives, Earth's climate, and our fate are controlled by the "**nuclear fire**" *in the neutron-rich core of the sun.*

Emerging Pattern from Connecting Dots that Led to Climategate

Having made yourself alike in pain and pleasure, profit and loss, victory and defeat, engage in this great war and you will be freed from sin, Arjuna.

Bhagavad Gita 2:38

Today Anthony Watts asked readers to help “connect the dots” on the global climate scandal. I have been doing that since the Climate documents and emails were released in 2009.

<http://wattsupwiththat.com/2012/04/20/a-request-to-readers-write-a-connect-the-dots-letter-this-weekend/>

Actually I already had many dots connected before the story broke in 2009, but I never considered the possibility that world leaders and leaders of scientific organizations, the news media, and even the Nobel Prize Committee might try to justify manipulation of government purchased data and outright deceit of the public.

Post-Climategate events helped me connect the dots back to the vaporization of Hiroshima on 6 Aug 1945, about 66.7 years ago. At that time I was almost nine years old and the person who would become my research mentor 15 years later – Dr. Kazuo Kuroda – was a talented young nuclear scientist working at the Imperial University of Tokyo.

By combining a very limited understanding of basic physical sciences, religions, psychology and anthropology – the pattern that emerges from my dots is of world leaders and leaders of the scientific community who saw Hiroshima consumed by “**nuclear fires**” and felt compelled by **fear** and the **instinct of survival** to secretly work together to save themselves and the world from possible **nuclear annihilation** by:

A. Uniting Nations: [*The United Nations was established in Oct 1945*]

B. Promoting Misinformation on “nuclear fires” in cores of galaxies, stars, planets and heavy atoms used in weapons of mass destruction. “**Nuclear fires**” sustain life, control Earth’s climate, create chemical elements, and power our expanding universe: [*Consensus opinions on internal composition of Sun and other stars abruptly changed from Iron to Hydrogen in 1946*].

Here is a rough outline of my conclusions;

1. **Science** shows we have been richly blessed with favorable conditions for life:

- _a.) There is little, if any, doubt that naked apes are near the very top of the ladder of evolution
- _b.) On a unidirectional march from birth to death, in an expanding universe of ever increasing entropy
- _c.) Surrounded by a continuous flow of energy from the conversion of mass (m) into energy (E) in the core Sun
- _d.) A process Einstein explained in his insight into the spiritual template that underlies the physical universe: $E = mc^2$
- _e.) With more simple forms of life that can convert solar energy into foodstuff for naked apes, their offspring, farm animals and pets.

2. **Scriptures** teach life is a treacherous journey between opposing forces:

- _a.) Good (God): Accepting reality, benevolent, compassionate, considerate, giving, kind, loving, selfless, etc.
- _b.) Evil (Devil): Selfish, regretful, remorseful, resentful, pride, power, lust, greed, control, arrogance, anger, etc.
- _c.) Soul (Self): Chooses between good and evil.

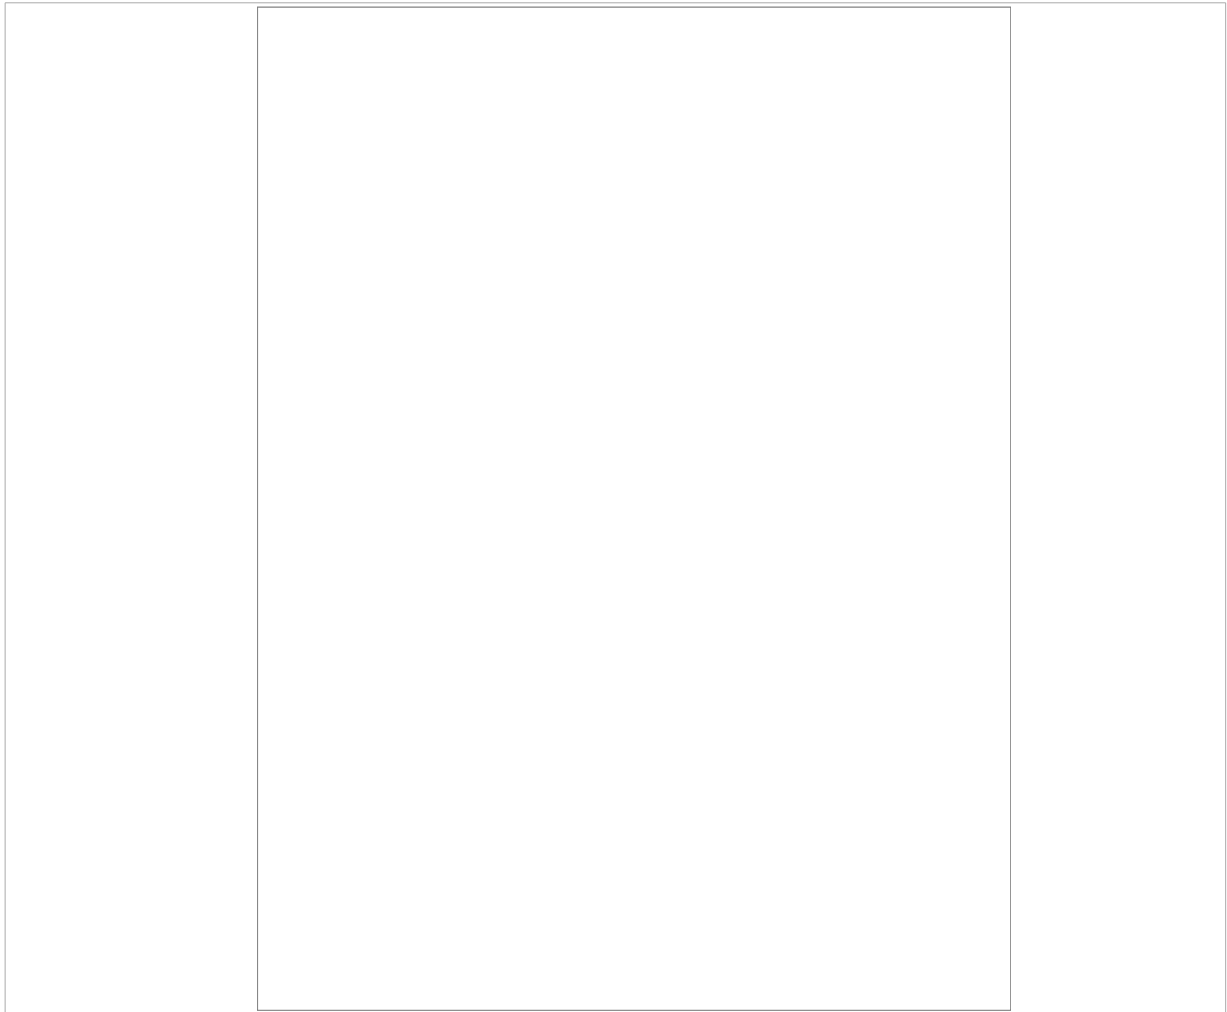

3. **Freudian Psychology**

- _a.) The Superego: Dr. Jekyll accepts moral teachings as valid indicators of reality.
- _b.) The Id: Mr. Hyde contains restless libido instincts, selfish desires, will to live.
- _c.) The Ego: Self seeks to guide instincts, desires into socially acceptable behavior.

4. **Anthropology** (Gleamed mostly from life and a couple of book reviews)

The Naked Ape does exactly what the **self-righteous minds** of intelligent, aggressive, creative, manipulative creatures can justify. The Naked Ape is mostly controlled by cause and effect, just like the rest of the universe.

The psychiatrist, Dr. Karl Menninger, reported a similar conclusion in 1966 in his book, “**The Crime of Punishment**”

[The Crime of Punishment](#)

http://books.google.com/books/about/The_Crime_of_Punishment.html?id=PVIgiqoCCskC

The zoologist, Dr. Desmond Morris, also wrote much the same material in the Introduction his 1967 book, “**The Naked Ape**”:

“highly successful, . . . intensely vocal, acutely exploratory. . . . spends a great deal of time examining his higher motives and an equal amount of time studiously ignoring his fundamental

ones. . . . in acquiring lofty new motives, he has lost none of the early old ones. . . . his old impulses have been with him for millions of years, his new ones only a few thousand no hope of quickly shrugging off the accumulated genetic legacy of his whole evolutionary past. . . . would be a far less worried and more fulfilled animal if only he would face up to this fact.” (p. 9)

http://evolbiol.ru/large_files/naked_ape.pdf

I deeply regret that it took this member of the naked apes so long to connect the dots and decipher the web of deceit that naked ape leaders started to weave ~66.7 years ago to protect themselves and the world from “**nuclear fire**” and the threat of **nuclear annihilation** .

5. **CONCLUSION:** World leaders who betrayed us are no more and no less flawed than the rest of us naked apes. To escape the “ego cage” and become part of the benevolent universe is the goal of life.

With kind regards,
Oliver K. Manuel

15.  Brian says:

[April 23, 2012 at 9:21 am](#)

“So the final conclusion would surely be that whereas other civilizations have been brought down by attacks of barbarians from without, ours had the unique distinction of training its own destroyers at its own educational institutions, and then providing them with facilities for propagating their destructive ideology far and wide, all at the public expense. Thus did Western Man decide to abolish himself, creating his own boredom out of his own affluence, his own vulnerability out of his own strength, his own impotence out of his own erotomania, himself blowing the trumpet that brought the walls of his own city tumbling down, and having convinced himself that he was too numerous, labored with pill and scalpel and syringe to make himself fewer. Until at last, having educated himself into imbecility, and polluted and drugged

himself into stupefaction, he keeled over—a weary, battered old brontosaurus—and became extinct.”

— Malcolm Muggeridge, Vintage Muggeridge: Religion and Society

Hello Oliver

Nice Blog.

I just take off my hat to you Oliver and others who stand up for scientific evidence rather than the MOB who are influenced more so today by media, TV, political opinions, Newspapers and the like.

Easy to say good work, but! harder to follow in your footsteps.

[Reply](#)

-  [omanuel](#) says:
[April 30, 2012 at 4:59 pm](#)

Thanks, Harry!

I did not choose my defects or assets in the journey of life.

Life was rough when I was very, very young. That is probably why I became so stubborn and angry.

In hindsight, I suspect that Professor Paul Kazuo Kuroda selected me to be his student in 1960 because he saw that science was being corrupted by political manipulation and recognized that my defects might be a way to get the message out about the nuclear processes that gave birth to the solar system.

Again, Harry, I appreciate your kindness.

With kind regards,
Oliver

Message to Neutron Repulsion Group
30 April 2012

Dear friends,

The Australian science news reporter, Jo Nova, reported an amazing 30-year timeline of events leading to the Climategate documents and emails that surfaced in Nov 2009.

<http://joannenova.com.au/global-warming/climategate-30-year-timeline/>

We now have reliable evidence that events leading to Climategate actually started 64 years earlier as *one of two response to the “nuclear fires” that consumed Hiroshima and marked the end of the Second World War on 6 Aug 1945.*

1. Society benefited from publicly reported decisions to:

- _a.) Unite Nations
- _b.) Reduce Nationalism and Racism
- _c.) Avoid the Threat of Nuclear War

2. Society and many fields of science were greatly damaged by secret decisions to obscure information on the source of energy that triggers “nuclear fires” in the cores of:

- _a.) Heavy atoms like Uranium
- _b.) Some planets like Jupiter
- _c.) Ordinary Sun-like stars

_d.) Galaxies like our Milky Way

World leaders became rulers rather than servants of the public in hiding the source of energy that sustains our lives, controls Earth's ever-changing climate, and powers the expansion of the universe as compact nuclear matter is transformed into expanded atomic matter.

The late Professors Fred Hoyle and Paul Kazuo Kuroda left behind information on the start of deception in science following the "**nuclear fires**" that ended the Second World War:

Professor Fred Hoyle: Reported one key to the Climategate mystery in his autobiography, "**Home Is Where the Wind Blows**" [University Science Books, Mill Valley, CA, 1994] 441 pages.

In describing a conversation with Sir Arthur Eddington on a spring day in 1940, he reports:

"We both believed that the Sun was made mostly of iron, . . ." (page 153)

"The high-iron solution continued to reign supreme in the interim (at any rate, in the astronomical circles to which I was privy) until after the Second World War, . . ." (page 153)

Professor Paul Kazuo Kuroda (A former faculty member at the Imperial University of Tokyo who was sent to Hiroshima to investigate its destruction on 6 Aug 1945): Reported the other key to the Climategate mystery in the Introduction to "**The Origin of the Chemical Elements and the Oklo Phenomenon**" [Springer-Verlag, Berlin, 1982] 165 pages.

"One day in August 1945, while standing in the ruins of Hiroshima, I became overwhelmed by the power of nuclear energy. The sight before my eyes was just like the end of the world, but I also felt that the beginning of the world may have been just like this." (page 2)

The beginning of the world was indeed just like the event that consumed Hiroshima on 6 Aug 1945, as finally published this month in the *Apeiron Journal* **19**, 123-150 (April 2012)

<http://tinyurl.com/7t5ojrn>

The supernova birth of the solar system had been studiously avoided since first revealed by the decay products of short-lived radioactive elements in the Earth and in meteorites in 1960.

19.  [omanuel](#) says:

[May 2, 2012 at 3:57 am](#)

An Open Letter to World Leaders, Editors and Publishers of Information for the Public and for the Scientific Community

"One day in August 1945, while standing in the ruins of Hiroshima, I became **overwhelmed** by

the power of nuclear energy.”

“The sight before my eyes was just like the end of the world, but I also felt that **the beginning of the world may have been just like this.**”

These two sentences describe the scene that a young nuclear geochemist from the Imperial University of Tokyo – Dr. Kazuo Kuroda – observed shortly after Hiroshima was consumed by man-made “**nuclear fire**” ignited by neutron-rich cores of uranium atoms on 6 August 1945 [1].

The ***overwhelming power of nuclear energy*** has not been used to benefit mankind for reasons explained in comments 1-7 below.

The bold ending of the second sentence started to be fulfilled by experimental observations in 1960, when Dr. Paul Kazuo Kuroda invited me to his office in Fayetteville, AR, USA to see for myself evidence that natural “**nuclear fire**” made our elements at the birth of the solar system.

That meeting convinced me to select Professor Kuroda as my research mentor and the origin of the solar system as my research topic. Today fifty-two years later, I am pleased to report that five decades of space-age experimental data [2] have confirmed: Kuroda was exactly right in August 1945,

The beginning of the world five billion years ago was just like the nuclear fire that consumed Hiroshima on the 6th of August, 1945.

To have experimental observations confirm hypotheses is exactly what the scientific method was designed to accomplish. So why this open letter?

1. The material published in April of 2012 [2] documents fifty-two years of purposeful deception about the beginning of the world by world leaders, editors and publishers of information for the public and for the scientific community.
2. The Climategate e-mails and documents released in November of 2009 demonstrate similar deception and collusion of scientists and politicians in misinforming the public about global warming [3].
3. The material published in April of 2012 [2] confirms that our lives are sustained by an abundant stream of energy that flows outward from the Sun’s pulsar core, the great benevolent reality celebrated throughout recorded history by artists, musicians, poets, saints and scientists alike.
4. Artists, musicians, poets, saints and scientists – including Einstein’s famous 1905 report that mass (**m**) is stored energy (**E**) – celebrated and communicated the great benevolent reality that surrounds and sustains life, . . . until about 1945-1946.
5. After Hiroshima was destroyed by the release of energy (**E**) stored as mass (**m**) in cores of uranium atoms, as predicted by Einstein [$E = mc^2$] in 1905, the message of a benevolent reality vanished from the scientific community:
 - _a.) The United Nations was formed to avoid nuclear war,
 - _b.) Information on energy (**E**) stored as mass (**m**) was obscured,
 - _c.) The Royal Society promoted population and environment control [4], and
 - _d.) World leaders became rulers who used science as a tool of Godless, fear-mongering propaganda, at least in nations of the formerly “Free West”
6. In describing a conversation with Sir Arthur Eddington on a spring day in 1940, the late

Professor Fred Hoyle shows how information on solar energy (**E**) stored as mass (**m**) was obscured [5].

_a.) “*We both believed that the Sun was made mostly of iron, . . .*” (page 153)

_b.) “*The high-iron solution continued to reign supreme in the interim (at any rate, in the astronomical circles to which I was privy) until after the Second World War, . . .*” (page 153)

_c.) “*when I was able to show, **to my surprise**, that the high hydrogen, low-iron solution was to be preferred for the interiors as well as for atmospheres” of stars.* (page 154)

7. Today world leaders, editors and publishers of information for the public and for the scientific community are sitting on a powder keg of discontent that threatens to disrupt social order [6] unless this group finds the courage that Presidents Eisenhower and Kennedy used in organizing the natural creativity of humans to confront the Sputnik threat in 1957 with the landmark Apollo landing on the Moon in 1969!

That seems to be the only plausible way to restore integrity to government science and the control of government to its rightful owners – the public.
